

# Statement on Solar Electricity:

## *It's Bright to go Solar*

UWE Bristol plans to quadruple their solar generating capacity over the next 2-3 years, including a substantial array at our Frenchay Campus.

**This array is set to be the largest single roof-mounted array in the UK University sector.**

UWE Bristol recognises the importance of on-site generation, to support the national decarbonisation agenda, increase energy security and enhance local renewable energy capacity.

UWE Bristol is proud to be supporting Solar Photovoltaic technology and through these actions looks to inspire the next generation of solar technologies and graduates to work in the PV sector.
